

Product description

The Monogram stamp packages adds a range of attractive Monogram Templates to your uTypia shop

More than 120 Templates in Square and Round with different backgrounds and fonts.

This makes it easy for the end customer to create his personal monogram stamp

The stamp templates are assigned to Trodat Stamps in a separate Product Category

How does it work

uTypia support copies the Product category with the Monogram stamp products (Trodat Printy line) into the shop(s) and catalog(s) you select – as an invisible category. The category and products names and description are available in several languages. Templates are also copied – Templates are available in 2 Versions – one with an actual name and an US-Address – one with "Place your text here". To use the templates several fonts from the uTypia font pool will be activated by uTypia support. These fonts are checked to be free for commercial use and internet shop usage.

The shop-owner should adjust category and product names and descriptions – and adjust the pricing

If you need the fonts also locally – you can download them from <http://fontinfo.utypia.com> – uTypia font pool

Target group

Rubberstampmakers who want to sell Monogram stamps direct or via a reseller

Advantages and disadvantages

- Attractive Monogram Stamp Templates for your customers
- Fonts must be activated for your shop.
- uTypia consumernext shops do not support the line and font, font-size restrictions as does uTypia business 6
